ADAPTATION INSTEAD **OF DEFEN-**SIVENESS

AFTER YEARS OF CONTINUOUS GROWTH, WE ARE HEADING TO TURNDOWN OF ECONOMIC DEVELOPMENT. INSECURITY IS SPREADING.

A turnaround in interest rates, geopolitical conflicts, the unpredictability of Trump's foreign policy and the trade war against China, Brexit and the strengthening of nationalism in many countries are slowing down growth. Is a recession imminent in Germany?

their rationalisation and growth impulses. innovation cycles are accelerating. The same applies to the transformation of and lean principles.

companies are also plagued by internal convious. But that's exactly the problem. For it nificantly from similar phases in the past cerns. In recent years, massive investments is not the crisis that must be feared, but the in two respects: firstly, by the rapid pace at have been necessary, above all in strategic uncertainty that precedes it. By paralyzing which industrial markets are changing todigitization projects, smart technologies companies, blocking critical investments day in view of technological leaps and the and initiatives to improve operational ex- and slowing initiatives - all at a time when new business models based on them. On cellence. These have often not yet developed customer demands, global competition and the other hand, because many of the classic

organizational structures according to agile Instead of prevention, the following sec- ed or are working too slowly due to constant In view of this supposedly imminent danger, cost structures - to the changed framework nel savings are hardly an option.

In addition to these external conditions, the question of preparatory measures is ob- conditions. The situation today differs sigcost-cutting levers, such as purchasing or automation, have already been fully exploittion therefore deals with adaptation, i.e. optimization. In addition, in the age of a nothe ability to adapt - especially one's own torious shortage of skilled workers, person-

HIGH SPEED ADAPTATION THE ROI COST REDUCTION PROGRAM FOR VOLATILE **INDUSTRIAL MARKETS**

In this situation, new methods for rapid adaptation to volatile market conditions are needed. The High Speed Adaptation ROI program is designed to address these issues and deliver fast acting approaches that can effectively reduce manufacturing, logistics and indirect costs:

ZERO-BASED ORGANIZATION

Organizations whose structures have grown over the years usually have three charac- can be used to systematically identify and savings potentials. After just a few weeks, teristics in common: they are complex, non-uniform and therefore inefficient. Unfortunately, there are no model solutions to overcome these deficits. Often only a radical new start can help to align the indirect are- all value creation activities, determine their cant reduction in maintenance costs. as leanly and cost-efficiently. Using the zero-based organization approach, ROI works with his customers in just 9 weeks to develop a roadmap for resizing their locations that optimally supports their value-adding processes. This allows up to 40% of the controllable indirect costs to be reduced. Global locations are consolidated, the Global Footprint becomes more efficient.

140 INSTANT PAYBACK

Quality fluctuations in manufacturing not only cost time, but also money. Even small lead to the rejection of entire components. But how can quality-relevant disturbances in the manufacturing process be iden-
