

FROM LOSS TO GAIN

Identifying and leveraging new levers for efficiency

Higher output, less waste: there is always more to learn when it comes to this classic optimization challenge. Whether on the production line itself or at other stages of the value chain, it pays to continually take a critical look at current performance levels.

Or, as they say in Bavaria: 'There's always room for a little bit'. It is even better when that 'little bit' - manifesting as shorter lead times, reduced inventory, higher equipment efficiency, and so on - adds up to a significant boost in profitability and growth.

In this issue of the newsletter, we present starting points and best practice examples for such an approach. We wish you an informative and inspiring read.

Best regards

Your team from EFESO

PERFORMANCE BOOST

Reduce material costs by up to 20% and improve OEE by 40%: benefit from the expertise of our Industrial Manufacturing team. We deliver strong results in the manufacturing of industrial goods, commercial vehicles (off-highway), and machinery and plant engineering.

INITIATING OPERATIONAL EXCELLENCE

To drive growth, an energy technology manufacturer is strengthening its operations. As part of an OPEX program, three steam turbine plants are setting the course for the entire manufacturing network. Read our new case study to learn how the program was successfully launched with an OPEX assessment.

PARTICIPATE AND WIN

Seize the opportunity to secure a place for your company in the INDUSTRIE 4.0 AWARD «Hall of Fame.» Take your chance and present your industrial innovation to us **by June 30, 2026!** Participation and the award itself are free of charge.

ACTIVATE COST POTENTIAL

Check your entire value chain in order to activate savings potential. We support cost-cutting phases with strategic and stabilizing elements and thus also strengthen the long-term performance of your organization.
